### **SUPPLEMENTAL EXAMINER'S AMENDMENT**

An examiner's amendment to the record appears below. Should the changes and/or additions be unacceptable to applicant, an amendment may be filed as provided by 37 CFR 1.312. To ensure consideration of such an amendment, it MUST be submitted no later than the payment of the issue fee.

Authorization for this examiner's amendment was given in a telephone interview with Justin Swindells on September 26, 2006.

The application has been amended as follows:

In the claims:

Previously canceled claims 3, 4, 14, 17, 18, 24, 30, 31, 32, 39 and 48 have been allowed since they depend from previously allowed generic independent claims 1, 15 and 36.

The allowed claims are 1, 3-19, 21-33, 36-39, 41-45, 47, 48 and 58-62.

The following is an examiner's statement of reasons for allowance: The present invention is directed to a directional microphone. Independent claim 1 identifies the uniquely distinct feature of a directional microphone having an elongated acoustical conduit connecting a front volume and a back volume to produce a 12 dB/octave low frequency roll-off. Independent claim 15 identifies the uniquely distinct feature of a directional microphone having an elongated acoustical conduit connecting a front volume and a back volume to have a frequency response curve with a 12 dB/octave roll-off at frequencies below about 500 Hz. Independent claim 36 identifies the uniquely distinct feature of a directional microphone having an elongated acoustical conduit connecting a front volume and a back volume to produce a 12 dB/octave low frequency roll-off. Independent claim 45 identifies the uniquely distinct feature of a directional microphone having an elongated acoustical conduit connecting a front volume and a back

volume to have a frequency response curve with a 12 dB/octave roll-off at frequencies below about 500 Hz. Independent claim 58 identifies the uniquely distinct feature of a directional microphone having a front volume and a back volume exposed to the environment and a wind suppression conduit with a diameter from about 0.05 mm to about 0.5 mm connecting the front and back volumes. Independent claim 60 identifies the uniquely distinct feature of a directional microphone having a front inlet and a back inlet including screens wherein an elongated conduit having an acoustical inertance is connected to the front and back inlet tubes downstream of the screen structures.

The closest prior art, Johanson et al. (US 3836732) teaches a directional microphone having selectable inlet to either one or both of the front and rear volumes and Killion et al. (US6285771) teaches a directional microphone with screens on the front and rear inlets for sound peak dampening. The prior art fails to anticipate or render the independent claims obvious.

Any comments considered necessary by applicant must be submitted no later than the payment of the issue fee and, to avoid processing delays, should preferably accompany the issue fee. Such submissions should be clearly labeled "Comments on Statement of Reasons for Allowance."
